**INTERNATIONAL PRELIMINARY
EXAMINATION REPORT - SEPARATE SHEET**

International application No PCT/GB99/00655

I The documents cited in the search report do not disclose a composition according to any of claims 1-9 or its use in ink jet printing. The subject-matter of claims 1-12 is thus novel.

II The closest prior art is represented by EP-A 616 017 ("D1"), disclosing water-based ink jet inks, suitable also for use in thermal printers, which contain a water-dissipatable polyurethane with a molecular weight of at most 5000, a colorant and a water soluble organic solvent as a humectant. See D1, claims 1 and 5-11, page 11 line 11 to page 12 line 46, page 13 lines 20-33 and lines 54-56, the synthesis examples 6-10 and the working example 10. The inks provide good printing characteristics as shown in Table 9 and mentioned in lines 48-52 of page 25. The difference with compositions of the present application is that D1 does not mention the presence of a water-immiscible solvent.

The present application does not mention why the water-immiscible solvent is added and there are no comparative examples where an ink as defined in claim 1 is compared with a similar ink lacking the water-immiscible solvent. The comparative examples C1 and C2 of the present application do not represent the prior art as exemplified by D1 and D2. The applicant suggests in his letter of 08-03-2000 that the problem is to improve the storage stability, but there is no evidence that the storage stability of the presently claimed compositions is larger than that of the compositions according to D1. There is no evidence that the water-immiscible solvent provides any particular effect and thus the problem that is to be solved by the present invention seems to be merely the preparation of a variant of the inks disclosed in D1.

It is known to add water-immiscible solvents, which have a plasticising effect, to polyurethane-containing water-based ink jet inks, see D2 claims 1 and 21-24. It is well within reach of a person skilled in the art to add a water-immiscible (plasticising) solvent to the inks of D1. The subject-matter of the present independent claims 1 and 9-12 lacks an inventive step.

The composition of the polyurethane is not different from that of the polyurethanes of D1, and the preferred M_w range largely overlaps with the

**INTERNATIONAL PRELIMINARY
EXAMINATION REPORT - SEPARATE SHEET**

International application No. PCT/GB99/00655

preferred range of D1. D2 discloses the chemical incorporation of the colorant in the polyurethane (see claim 1) and the use of a colorant which is soluble in the polyurethane is an obvious modification of this idea. The percentages of the components of claim 5 are a variation of the percentages disclosed in D1: the ink properties of claims 7 and 8 do not differ significantly from those disclosed in D1. There is no evidence that the presence of benzyl alcohol has any special effect. The subject-matter of the dependent claims 2-8 thus does not add anything inventive to the subject-matter of claim 1.
